Art Unit: 1652

The disclosure is objected to because of the following informalities:

The chemical structures on page 17 do not make any sense. Apparently something is left out. Because the prior application was incorporated by reference, applicant can make this page like the corresponding page of the parent.

On page 88, the second chemical compound has several letters, numbers and chemical bonds that overlap.

Appropriate correction is required.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 139-164 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The instant specification teaches the encapsulation of several enzymes in silica-based sol-gel matrices and that they have enzymatic activity after encapsulation. However the instant claims are drawn to "treating a patient with [or suffering from] a disease, condition of deficiency". The specification does not teach such a treatment or use any art recognized system to test for such a treatment. One of ordinary skill in the art would not know what specific disease, condition or deficiency could be treated. They would not know whether this treatment would work or whether perhaps this treatment with a silica-based sol-gel matrix would cause some harm to the patient ra-

ther than treating the condition. There is no teaching that any such treatment has been tried and what the results were.

Therefore, one of ordinary skill in the art would not know how to use the claimed invention or specifically how to make the invention in a manner so that it would be operable.
